

## Flagpole Range 1, Cylindrical Flagpoles

made in Germany

Our range of one-piece completely cylindrical aluminium flagpoles are made in Germany – and offers optimum functionality, combined with durability and safety.

All flagpoles have a silver-coloured anodized surface as standard. We offer selected flagpoles as a two-piece pole at an extra cost. Flagpoles of up to 9 m above ground level are supplied with a ground sleeve or centring sleeve. Hinged base plates are available on request. Flagpoles with a height of up to 10 m above ground level are equipped with a hinged base plate as standard.

Please note: it has been proved in static tests that all flagpoles can be used with flags at wind forces of up to 9 Beaufort (about 88 km/h). The tests were carried out for the maximum flag formats specified. At stronger wind forces, the flags should be lowered. In the case of improper use, we exclude any and all liability. We will send you foundation plans of the individual flagpoles on request.

### Basic

- Maximum value for money!
- external halyard
  - flagpole tube without groove
  - flag hoisting with nylon halyard (Ø 5 mm)
  - clamp (160 mm)
  - supplied with ground socket
