# Double-Sided Promotional Textiles

A special double-sided finish allows for one or two different positive designs on the front and reverse side of a flag or banner. Two prints and a durable inner layer are sewn together.

Double-sided flags are hoistable like common flags, move well in the wind and dry fast. They are ready to use with no prewash required.

## Size

for promotional textiles with up to 6m<sup>2</sup> advertising space

## Materials

- Printed material: Multiflag®, 110 g/m<sup>2</sup>, Dekoflag H, 120 g/m<sup>2</sup>, Multisol® L, 115 g/m<sup>2</sup>
- Inner Layer: durable, weatherproof material

## Portrait Style Flag Finish

### Option with hidden header tape for maximum use of advertising space!

- two prints with an opaque inner layer, sewn together inside out along the three open sides of the flag
- reinforced open corners - stitched in a triangle
- pole side finished with inserted, invisible header tape and plastic snap hooks

### Option with visible header tape

- two prints with an opaque inner layer, sewn together inside out along the three open sides of the flag
- reinforced open corners - stitched in a triangle
- pole side finished with header tape and plastic snap hooks

Other finishes e.g. for flagpoles with banner arms or banners are possible! There are various finishing options for indoor applications as well, all being provided according to your individual demand.

## Other possibilities of use:

Bowflag®,  
Display Wall Basic,  
Indoor Banner

Compared to other outdoor advertising media, promotional textiles benefit from their ability to move with the wind. However, the wind can enforce mechanical stress on the double-sided flag and the flagpole as well. We recommend to take your flag down during strong conditions (windforce 6, maximum 49 km/h respectively 30 mph). Sachsen Fahnen does not assume liability for any damage on flag and flagpole.

As we are constantly developing our products we reserve the right of changing technical issues and dimensional deviations.
