

## Rotating sales promotion...

### ... catches the eye - even more!

Draw the attention from your prospects at the point of sale, at events and at trade fairs by using rotating sales promotion. For indoor use we supply a rotating element to hang decoration banners from ceilings or supports.

The Twiny® indoor banner, in particular, becomes an expressive design element. Showing a positive print on both sides, your advertising message gets enforced by the slow rotation.

The handling is easy. Mount the rotating element to a ceiling or support system and attach the Twiny® to it with an adaptor.

By the way, this idea of presentation does also work for a Varioform. Simply attach the Varioform to the rotating element and - done! An adaptor is not needed for this use.

### Technical details

#### Rotating element

Rotating element

Description:	rotating element with electric lead, for ceiling mounting
Colour:	white
Diameter:	130 mm
Height:	85mm
Power:	220 - 250 V
Speed:	2.5 revolutions per minute (clockwise)
